Team Stattastic Final Presentation

[Just Dance(ability)]

[Spotify Statistics]

Ariana Matarangas, Jake Rosen, Mikaela Lipp, and Anna Seaman

INTRODUCTION: TOPIC

Research questions:

01

How does danceability affect the popularity of songs?

3:15min

02

How does the impact of danceability on popularity differ between genres?

3:15min

03

How do other variables related to a song influence the relationship between danceability and popularity?

3:15min

INTRODUCTION: DATA

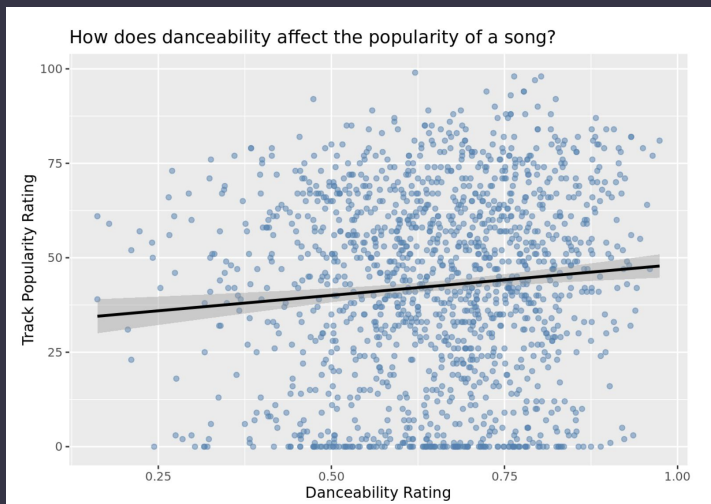

Spotify R package: contains 5,000 songs from 6 main music categories (EDM, latin, pop, R&B, rap, and rock)

Danceability	How suitable a track is for dancing based on a combination of musical elements including tempo, rhythm stability, beat strength, and overall regularity. Ranges from 0.0 (least danceable) to 1.0 (most danceable).
Popularity	Song popularity on a scale from 0 to 100.
Tempo	Estimated tempo in beats per minute (BPM).
Energy	Measure of intensity and activity based on dynamic range, perceived loudness, timbre, onset rate, and general entropy. Ranges from 0.0 to 1.0.

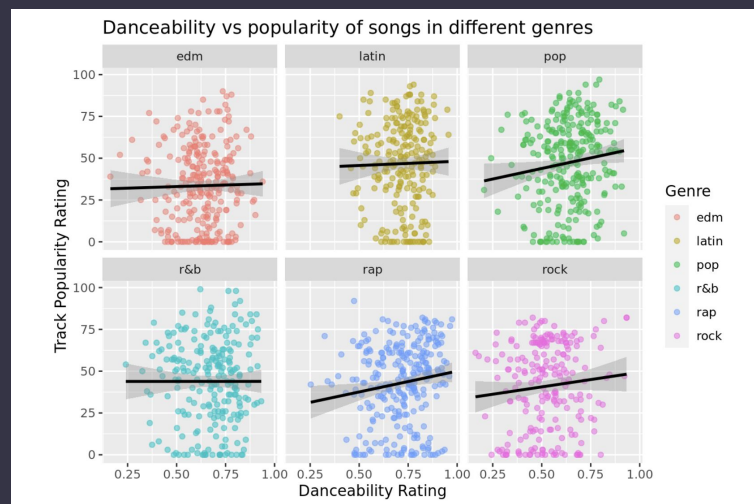

EDA HIGHLIGHTS

General trend of popularity
based on the tracks danceability
rating

*Random sampling of 1500 songs

Trend of popularity based on
the tracks danceability
separated by the genre

*Random sampling of 1500 songs

MODEL I: GENRE & DANCEABILITY

Order by ▾

Model		AIC
	General - All Genres	304371.9
	Latin Genre	47986.36
	Rap Genre	52373.25

MODEL II: DANCEABILITY*TEMPO*ENERGY

CONCLUSIONS

1. Danceability is not a great predictor for popularity when not faceted by genre.
2. Danceability has different impacts on popularity when faceted by genre.
3. Danceability has a positive and significant effect on popularity ratings of general, latin, and rap songs. This relationship varies
 - a. Rap has the highest coefficient
 - b. General has the lowest
4. General model had best fit according to AIC criteria (lowest mean squared error)
5. The interactive model for danceability * tempo * energy has lowest AIC
6. The additive and interactive models that included the energy variable had lower AIC values

FUTURE WORK

Other Variables

Examine the impact of other variables other than danceability (loudness, key, tempo)

3:15

Other Dataset

We could examine a dataset of different spotify songs to validate our results

3:20

Other genres

We could delve deeper into a subgenre of rap or latin to learn more about popularity

3:10
